PARKEE

Android Engineer Test

You are asked to create a Movie Android Application. We provide you page wireframe to follow. The app uses the Movie DB API. Please refer to the documentation on how to make requests.

Rules

1. Submit the project result within 3 days since the test is given
2. Upload project to GitHub
3. Implement API https://developers.themoviedb.org/3
4. Implement Architecture MVVM/ MVP
5. **If the App has been completed, please send back the GitHub link and APK file to HR**

Features

1. Home
    1. Popular movie: https://developers.themoviedb.org/3/movies/get-popular-movies
    2. Top rated: https://developers.themoviedb.org/3/movies/get-top-rated-movies

3. Now Playing: https://developers.themoviedb.org/3/movies/get-now-playing
4. Favorite button icon: Navigation to page list favorite movie

2. Detail

1. Review: https://developers.themoviedb.org/3/movies/get-movie-reviews
2. Favorite : save item to local and remove item from local
3. Share: Show bottom sheet

3. Favorite List

Users can see a list of their favorite movies.

Goals

1. No bug and Crash
2. All required Features are implemented and running well.
3. Selection of the library is a part of our grading

Bonus Point

1. Implement unit test
2. Implement Dependency injection (Hilt)
3. Using android jetpack
